

Career and Professional Development Track

Career development is more than submitting a resume to an online job application. It is knowing yourself, your interests, your skills, and how those fit into the world of work. Career development is crafting and telling your professional story and leveraging relationships to discover opportunities. Participants in the series of workshops will develop and practice tangible skills to apply to their internship/job search and general career strategy including resume building, networking and interviewing. In addition, participants will begin to develop their professional narrative to use as a guide during and after college and into their professional life.

Participants in the Career & Professional Development Track will:

- Develop their storytelling skills and practice telling their professional story.
- Build networking skills, including a framework for connecting with potential professional contacts.
- Enhance essential career planning and job search strategy documents including resumes, cover letters, and online networking profiles.
- Demonstrate an understanding of common interview questions and develop strategies to respond to interview questions aligned with personal goals and interests.
